Technical Test - Practical

RESOURCES

Required

| Machine | Ride-on Roller |
|-----------|---|
| | (Option 1) Single straight run for compacting, with hard-standing, kerbed edge on one side and an unsupported edge on the opposite side OR |
| Area | (Option 2) Several straight runs for compacting, with hard-standing, kerbed edge on one run and an unsupported edge on another run PLUS |
| | A radius for compacting, with supported edges PLUS |
| | A length of uneven ground and a gentle gradient (for travelling purposes) |
| Other | Material for compacting |
| equipment | Items/objects to create restrictions for manoeuvring |
| | The machine selected for the test must be in serviceable condition, fitted with a seatbelt and ROPS frame/cab, and conform with current legislation |
| | The operator's manual must be with the ride-on roller |
| | The single straight run (Option 1) must be at least 20 metres in length and 3 x the drum width. 15 metres of each run must be uncompacted and the remaining may form part of the hard standing |
| | • Each straight run (Option 2) must be at least 20 metres in length and 1.5 x the drum width of the roller respectively. 15 metres of each run must be uncompacted and the remaining may form part of the hard standing |
| Notes | The radius must have a curve of between 5 and 10 metres and 3 x the drum width and at least 3 kerb lengths of straight run at each end |
| | The radius must form part of one of the straight runs and the compacted area situated on the outside of the radius |
| | The material selected for compacting must clearly show areas compacted by the roller such as overlaps and direction changes |
| | The uneven ground must be safe for travelling on but be of a nature that forces the candidate to travel a slow speed |
| | The test is designed to reflect general granular sub-base type compaction, not bitumen rolling |

ACTIVITY

Instructions

| Sequence | Activity 1 must be undertaken at the start of the test Activities 2, 4 and 5 can be undertaken in any order during the test Activity 6 must be undertaken at the end of the test The test must be completed within a given time. The specifications' section gives further information. |
|--|--|
| Preparing for work | Complete all manufacturers' pre-start and running checks and prepare the ride-on roller for travel |
| Travelling & manoeuvring (refer to specifications) | 2 Travel to the work area and: pass through a restriction (in forward and reverse) drive up and down the gradient drive on the uneven ground |
| Setting up for work | 3 Prepare an exclusion zone and set the ride-on roller for the relevant work |
| Working tasks (refer to specifications) | 4 Compact the straight run or runs. Several objects must be placed on one of the runs (simulating ironwork) 5 Compact the radius |
| Shutting down | 6 Park the ride-on roller and carry out shut-down and securing procedures |
| | Compaction must take place up to the supported and unsupported edges, although the closeness will be dependent upon the roller and material type For the purposes of the test, an overlap will be constituted as no more or less than one quarter of the overall drum width |
| Notes | For the purposes of the test, a pass is constituted as compacting in one direction and returning in the same track |
| | If the machine is hot, checks unable to be carried out (i.e. coolant) may be assessed by the Tester using verbal questions |
| | Activity measurements |
| Travel restrictions | • 500 mm |
| Compacting duty | Three passes without vibration followed by six passes using vibration (if fitted) |
| To at time in ma | The dead reveal has assembled at within 4 hours |

Test timings • The test must be completed within 1 hour
